

DO180-Introduction to Containers, Kubernetes, and Red Hat OpenShift

Overview

Duration: 3 Days

Introduction to Containers, Kubernetes, and Red Hat® OpenShift (DO180) introduces building and managing Docker containers for deployment on a Kubernetes cluster. This course helps students build core knowledge and skills in managing containers through hands-on experience with Docker, Kubernetes, and Red Hat OpenShift Container Platform.

Objectives

As a result of attending this class, students should be able to containerize simple software applications and services, deploy them with Docker, Kubernetes, and Red Hat OpenShift, test the containerized version, and troubleshoot issues with deployment.

Pre-requisite

Red Hat recommends these prerequisites:

- Be able to use a Linux terminal session and issue operating system commands
- Have Red Hat Certified System Administrator (RHCSA) certification or equivalent experience
- Have experience with web application architectures and their corresponding technologies

Course Outline

- Course introduction
- Introduce and review the course.
- Get started with container technology
- Describe how software can run in containers orchestrated by Red Hat OpenShift Container Platform.
- Create containerized services
- Provision a server using container technology.
- Manage containers
- Manipulate pre-build container images to create and manage containerized services.
- Manage container images
- Manage the life cycle of a container image from creation to deletion.
- Create custom container images
- Design and code a Docker file to build a custom container image.
- Deploy containerized applications on Red Hat OpenShift
- Deploy single container applications on Red Hat OpenShift Container Platform.
- Deploy multi-container applications
- Deploy applications that are containerized using multiple container images.
- Troubleshoot containerized applications
- Troubleshoot a containerized application deployed on Red Hat OpenShift.

- Comprehensive review of Introduction to Container, Kubernetes, and Red Hat OpenShift
- Demonstrate how to containerize a software application, test it with Docker, and deploy it on a Red Hat OpenShift cluster.
